SUMMARY

Computer Engineering graduate (AI & ML) with hands-on experience building production-ready full-stack web applications using the MERN stack. Shipped three live projects — a social media platform, an expense analytics dashboard, and a role-based management system — with deployments on Vercel and Render. Comfortable owning the full cycle from REST API design and MongoDB modelling to Redux state management and responsive UI.

EDUCATION

B.E. in Computer Engineering (AI & Machine Learning)

2022 – 2026

Lokmanya Tilak College of Engineering, Navi Mumbai

SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Redux Toolkit, React Router, Tailwind CSS, Axios, Recharts

Backend: Node.js, Express.js, REST APIs

Database: MongoDB, Mongoose

Tools & Platforms: Git, GitHub, Postman, VS Code, Cloudinary, Vercel, Render

Concepts: Authentication, State Management, Component Architecture, API Integration

PROJECTS

Ugram — Social Media Web Application

GitHub — Live Demo

React.js, Node.js, Express.js, MongoDB, Redux Toolkit, Tailwind CSS, Cloudinary, JWT

- Built a full-stack social media platform with complete CRUD operations for posts, user profiles, and a like system; deployed frontend on Vercel and backend on Render.
- Secured the app with JWT authentication, HTTP-only cookie sessions, and protected routes on both client and server.
- Implemented optimistic UI updates for like/unlike via Redux Toolkit and integrated Cloudinary for image storage and transformation.

Smart Expense Analyzer

GitHub — Live Demo

React.js, Redux Toolkit, Tailwind CSS, Recharts, localStorage

- Developed a personal finance tracker with category-based expense logging, monthly summaries, and interactive spending breakdown charts using Recharts.
- Managed all application state through Redux Toolkit slices, keeping components decoupled and business logic testable.
- Persisted application state using localStorage, ensuring seamless data retention across browser sessions without backend storage.
- Designed a fully responsive dashboard that adapts cleanly across mobile and desktop viewports.

Employee Management System

GitHub — Live Demo

React.js, JavaScript, localStorage

- Built role-based dashboards for Admin and Employee users, with task assignment, status tracking, and access-controlled views.
- Implemented authentication and role-based access control with persistent session management using localStorage.
- Extracted shared UI logic into reusable components, reducing code duplication and improving maintainability.

EXPERIENCE

Aptech Ltd — Junior Server Incharge

Aug 2025 – Sep 2025

- Configured and monitored servers across multiple examination centres, ensuring stable availability throughout live online exam sessions.
- Established VPN connections and managed Remote Desktop access for real-time server administration; generated candidate credentials and verified registration data before each session.
- Collaborated with the IT team to resolve server, network, and hardware issues during exams and performed post-exam backups with data integrity checks.
